

# UP-SPOUT ADAPTER

## SPECIFIC DESIGN

All of our parts are CAD designed, and made in the USA, specifically for radon mitigation systems.

## QUICKER INSTALLATION

The Up-Spout adapter provides a smooth transition between 4" Schedule 40 pvc and 3"x4" metal downspout while also providing a fixed lower mounting point, for quick installation.

## WHY IT'S BETTER

Existing adapters create air turbulence, noise, and restricted airflow. Also fitment is not very good, leaving gaps for gas and condensate to escape around the connection point.

Our adapters fit tightly and provide a proper seal, a sleek smooth transition, and professional looking installation.
