

HYDRO

2.0

APPLICATION SPECIFIC DESIGN

All of our products are CAD designed, and made in the USA, specifically for radon mitigation systems.

WHAT IT DOES

HYDRO 2.0 is the superior solution for the prevention of water re-entry to the radon fan and sub slab soil, improving fan life, and reducing the potential for icing within the vent stack.

IMPROVED PERFORMANCE

Existing products restrict the internal pipe diameter down to 2", severely reducing the potential performance of the entire mitigation system.

HYDRO 2.0 has a 3.6" internal diameter, allowing the system to work at its peak potential.
